HYDROCOOLER

HaleyMfg.com

- ♦ Suitable for cherry bins in stacks up to SIX high (depending on the unit).
- ♦ Highly successful in remote locations or receiving and storage facilities.
- ♦ Stainless Steel or Painted Mild Steel options.
- ♦ No hassle, Automatic filter cleaning during operation.

A SYSTEM THAT WILL WORK FOR YOU!

PORTABLE HYDROCOOLER

Hydrocooler (water chilling drencher) system suitable for cherry bins in stacks of up-to 6 high, that is of one-piece construction in configuration of a highway semi-trailer.

Using a 25-TON (125 HP) refrigeration system will allow processing 13 tons per hour of cherries, cooling from approximately 85° F to 45° F.

These units have long been, highly successfully, set-up with near orchards in remote locations and connected to a portable refrigeration system and power supply, for cooling the cherries prior to transport long distances to the warehouse.

STATIONARY HYDROCOOLER

Hydrocooler (water chilling drencher) system suitable for cherry bins in stacks of up-to 5 high.

Bin conveyance and drenching system will allow processing of 20+ TONS per hour of cherries, dependent on refrigeration system, cherry temperature, and ambient temperature, etc.

These units have long been, highly successfully, set-up at receiving and storage facilities for cooling the cherries prior to storage and packing.

STATIONARY HYDROCOOLER

Hydrocooler (water chilling drencher) system suitable for cherry bins in stacks of up-to 6 high.

Bin conveyance and drenching system will allow processing of 40+ TONS per hour of cherries, dependent on refrigeration system, cherry temperature, and ambient temperature, etc.

These units have long been, highly successfully, set-up at receiving and storage facilities for cooling the cherries prior to storage and packing.
